

# Leading Canada's OTR Service

With over 70 years' experience supporting off-the-road (OTR) customers, we're ready to keep you rolling with our breadth of products, services, and expertise.

## TIRES & SERVICE YOU CAN RELY ON

Kal Tire brings both expertise and access to a wide selection of brands, including custom retreads. Our tire experts recommend the right tires to reduce costs, optimize tire life and maintain uptime of your equipment.

**BRIDGESTONE** **Firestone**

**MAXAM** **YOKOHAMA**

Wherever you are, whenever you need it, our technicians will be there. Our Kal Tire certified technicians and OTR Trucks built specifically for on-site service come to you to install, change and inspect tires. Plus with our national network and transportation fleets, there's no worry of waiting on stock.

## OVER 50 YEARS' RETREAD & REPAIR EXPERIENCE

Did you know Kal Tire is Canada's largest retreader? Whatever the tire size and conditions you face, Kal Tire's retreading and repairs can save you time and money.

Our OTR retreads come in two different formats:

**MOLD CURE**  
Bead to bead quality

**SMOOTH & GROOVE**  
Custom manufacture of the right tire design for your application

Our extensive repair service covers small spot repairs to large section repairs in giant tires. With our steel cable replacement repairs, we help to put tires with normally unrepairable damage, back into service.

## MORE PRODUCTIVITY WITH TOMS™

Tire & Operations Management System (TOMS™) is the tire maintenance planning system for mining sites that powers uptime, performance and safety, through fleet productivity and accessible, near-live reports.

### ✓ COMMUNICATE QUICKLY & EFFECTIVELY

Real-time data helps you make well-informed decisions on workflow planning, tire repairs and inventory management.

### ✓ COLLABORATE WITH A SHARED PLAN

Planning reports prioritize and summarize tire work needing to be performed to ensure efficiency and optimization of vehicle usage.

### ✓ IMPROVE FLEET INSPECTION COMPLIANCE & SAFETY

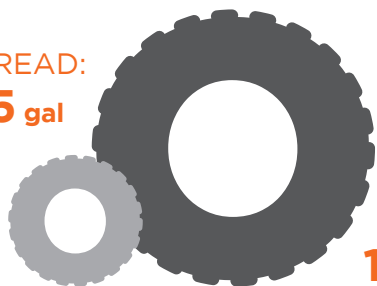

Catch critical issues that require immediate attention through automation of planned work orders such as fleet inspections and front tire rotations.

## ACHIEVE YOUR SUSTAINABILITY GOALS

Not only are retread tires less expensive than comparable new tires, but you also reduce your carbon footprint as fewer raw materials and energy are used to give a tire another life.

Gallons of oil used to produce a 45/65-45 loader tire:

RETREAD:  
**475 gal**

NEW:  
**1000 gal**

**This is a savings of 525 gallons per tire!**

# CARBON KALCULATOR

Sustainability at **KALTIRE**

Quantify the carbon savings your organization is realizing by using Kal Tire's tire programs and retreading services.

- ✓ Accredited documentation of your sustainability achievements
- ✓ Sourced data based on an ISO third party validated Life Cycle
- ✓ A proprietary calculator verified by SCS Global, a leader in sustainability standards

Kal Tire aims to extract maximum value from every tire, while avoiding landfill as long as possible. Through our **devulcanization technology**, rubber can be reused and put back into more tires and other rubber products as tire derived polymer (TDP).

- ✓ A circular solution using TDP
- ✓ Up to 25% TDP used in OTR retreading
- ✓ Conserves 90% of the energy required to make new tire materials
