

# Make The Season Shift For Your Business Fleet

The warmer days mean it is an important time to perform essential maintenance on your vehicle. Kal Tire is ready to help by offering expert tire inspections, brake checks and alignments, as well as other essential services to keep your business vehicles running safely and smoothly.

## Tire Change & Inspection

Having your tires checked for wear, damage, and proper air pressure is crucial for safety and maintaining optimal vehicle performance. Looking for your next set of summer tires? Your Kal Tire sales representative can recommend the best tires for your application.

**Did you know?** For every 12 degrees Celsius change in temperature, your tire pressure will rise by 1 to 2 PSI.

## Check Fluid Levels

Ensure oil, coolant, brake fluid and windshield washer fluid are topped up to the appropriate level.

## Brake Inspection

Winter driving can take a toll on brake pads and rotors. An annual brake check and proactive maintenance can help extend the life of your brake parts.

## Wiper Blades

Check and replace windshield wipers if they show signs of damage.

## Consider a Battery Check

The cold winter weather can impact a battery's performance. A check can identify any issues and help prevent breakdowns in warmer weather.
